Your predictions

Dr Shou;

I'm trying to replicate the analysis the Dr Jones did on your predictions but I don't have the material he was working with. Do you happen to have a list of the predictions you registered with the USGS?

I've looked at the past predictions on your website and I really don't see how anyone could evaluate them. References to placenames are too vague for precision in determining hit/miss. I can arbitrarily assign limits but that inevitably results in arguments over which are hits.

I understand you have permission to post Dr Jones review. Did you ever do that?

Thank you,

Roger Hunter
